

## The new ConverTTable LM S design driving simulator

*Today, the dream of the gamers around the world is going to be fulfilled, when the ConverTTable celebrates its tenth anniversary and reveals the new model LM S which is fundable at the crowdfunding Platform Startnext. This version is lighter and more affordable than the original. It extends the boundaries of multi-faceted furniture design! A Coffee table and Centerpiece which converts instantly into a full racing cockpit for the truly immersive experience.*

### ***Live your secret passion!***

The principle remains the same as the original ConverTTable (Releasing date 2010). A coffee table in your living room with few touches converts into high-quality cockpit for all your racing and flight simulator needs. As soon as a game session is done, the entire cockpit including pedals, steering wheels and seat are transformed back to a stylish coffee table. Therefore, it is notably space-saving, as well as decorative. What's more, you can convince yourself by checking it out online, as the **promo clip** has been released and now is available at <https://youtu.be/cq50YPH3vj8>

### **Made in Austria**

The ConverTTable with a price of approximately 4000 Euros remained reserved for the more well-funded customer, who appreciates the design and build quality of these High-tech Cockpits.

In order to be able to appeal to a larger market segment, for the past two years Markus Rumpold has directed his focus on the development of the ConverTTable LM S. An aluminum construction was used instead of wood- therefore the S. The parts have been designed so that the cockpit is delivered in pieces and can be self-assembled by the customer.

The basic model is produced in black and costs 2499€ incl tax without steerings. On the other hand, if you desire a more customized centerpiece for your home for a 200€ incl tax. you may choose from 200 different paint colors.

Now, the orders can be placed at Startnext. If it is funded successfully, shipment starts Mai 2018 onwards.

**About:**

Mechanical engineer Markus Rumpold exhibited the Prototype of the ConverTTable for the first time at a design fair in Kortrijk, in 2008. Two years after the reveal, the production model was shown at Gamescom in Cologne and purchasable. After Markus Rumpold has also distributed driving simulators of other brands, he now concentrates only on the further development & distribution of the ConverTTable as well as RECARO seats. Since 2014, Markus Rumpold has been employed by Descon Engineering, working in the development of the Mercedes Benz G Class.
